

# In Summary

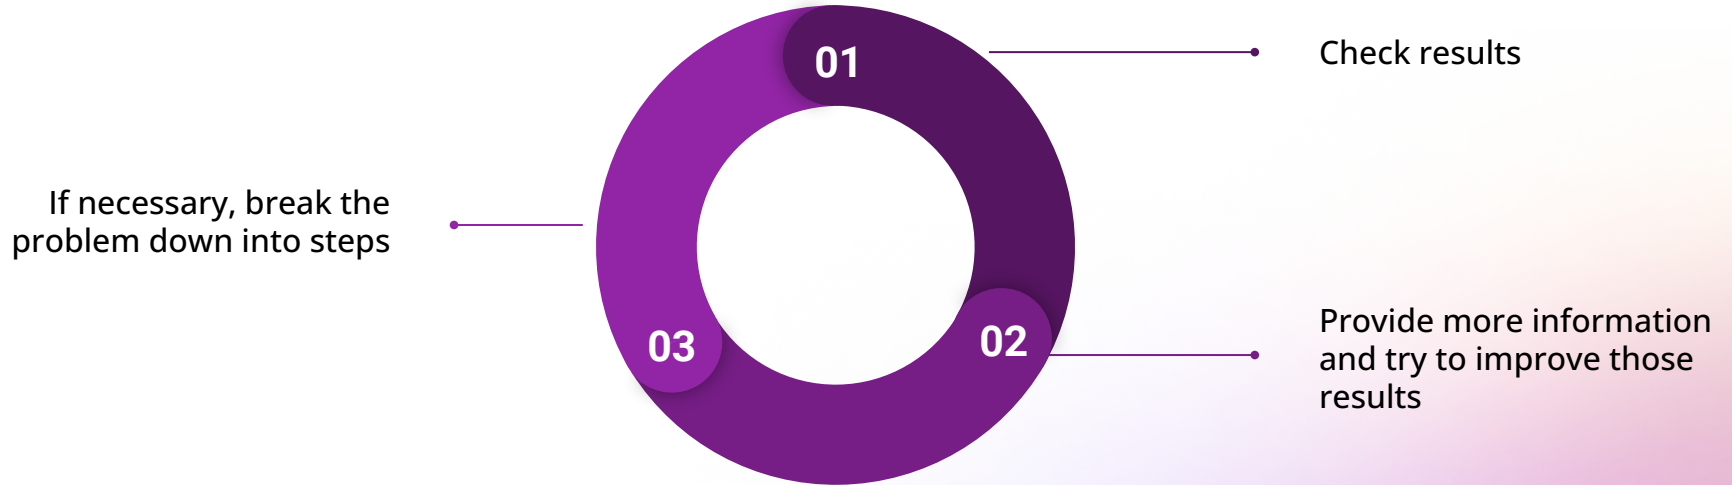

# Why You Should Care

# How to Get the Best Results from AI via Prompt Engineering

- 1 Set a good goal
- 2 Tell the computer what you want it to do
- 3 Check results & assess vs. threshold (break into pieces if necessary)
- 4 Run and re-run this process until it's ready for partial, then full automation

## The iterative nature of prompt engineering

# Final Words of Wisdom

## Final words of wisdom

-  **Do things! Go experiment, and don't wait.**

## Final Words of Wisdom

**Delegate to AI** when doing something you've done before; **use it as a thought partner** when it's something new (and go for a walk!)

## Final Words of Wisdom

The prompt engineering paradox:

You need to spend *less time* with AI, the more time you do spend with it.

“Thinking naked” is actually the desired outcome.
