

Assessing Prompt Output

ChiefAIOfficer.com

1 Navigate to <https://chat.openai.com/>

2 In the message field, enter the prompt that you would like to be assessed and reviewed.

The screenshot shows the ChatGPT interface with several suggested prompts and a custom prompt in the message field. The custom prompt is highlighted with a red border. The suggested prompts are:

- Show me a code snippet of a website's sticky header
- Tell me a fun fact about the Roman Empire
- Recommend activities for a team-building day with remote employees
- Make a content strategy for a newsletter featuring free local weekend events

The custom prompt in the message field is:

Please give me the last 50 years of the stock market listing major events from 1971 to 2021 and make sure it's line by line.
Ex. Stock market fact - 1972
Ex. Stock market fact - 1975

Below the prompt, there is a checkbox and the text: Please make sure that the facts are in italics and the year is in bold when responding.

At the bottom of the interface, there is a disclaimer: ChatGPT may produce inaccurate information about people, places, or facts. [ChatGPT September 25 Version](#)

3

You should see ChatGPT's output based on the prompt given.

Please make sure that the facts are in italics and the year is in bold when responding.

Certainly, here's an overview of major stock market events over the last 50 years (from 1971 to 2021). Keep in mind that while this is a high-level overview, the stock market is influenced by myriad factors, and there are many events that could be considered significant. I'll focus on some of the most impactful events year by year:

1971

- *NASDAQ stock market was established.*

1973

- *The oil crisis began leading to a severe stock market crash, which continued into 1974.*

1974

- *The Dow Jones Industrial Average (DJIA) dropped by almost 45% from its peak in 1973.*

1977

- *The Community Reinvestment Act was signed into law, encouraging banks to meet the needs of their entire communities.*

1980

Enter this prompt in the message field:

"ChatGPT, take the previous AI-generated response based on a specific command. Please Assess the output based on the following criteria:

Accuracy: Compare the AI's output against any well-known or universally accepted facts and data. Does it seem accurate?

Relevance: Determine if the output strictly adheres to the original command. Has it addressed the main points or veered off- topic?

Completeness: Analyze whether the response seems comprehensive, covering all the points of the command.

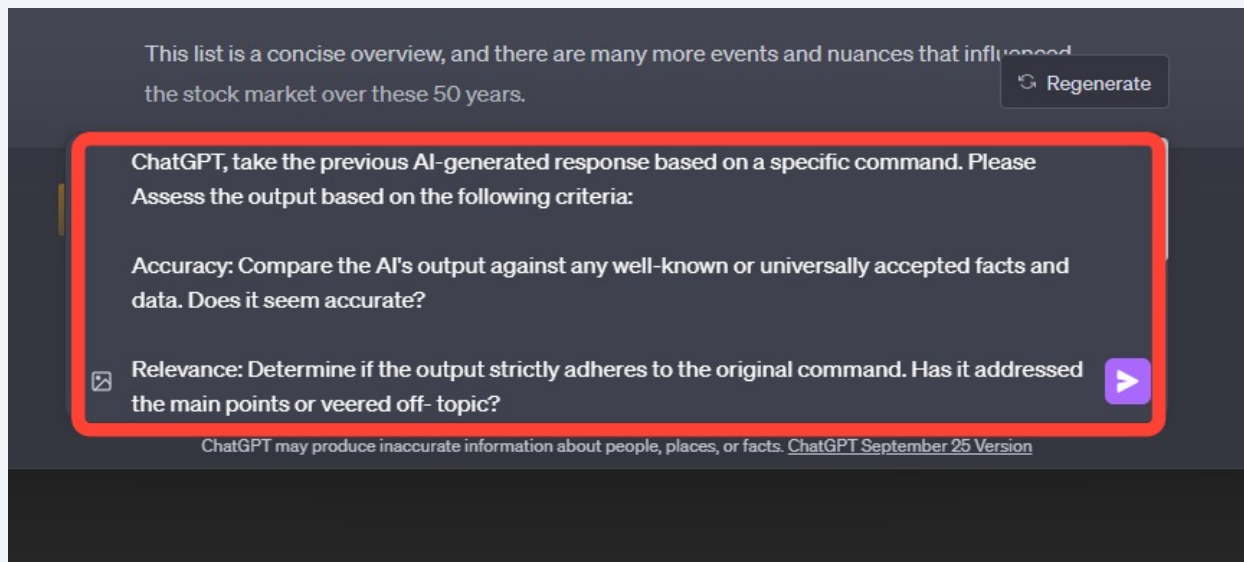

Format alignment: Does the output conform to any specified format or structure?

Ambiguities: Identify any parts of the output that could be unclear or open to interpretation.

Example Consistency: If the original prompt chain or command provided examples, ensure the output matches the style or pattern of those examples.

Given this, please assess the following AI-generated output: {AI-generated response}."

The prompt is designed to guide ChatGPT through the evaluation process, step-by-step. When you replace the previous message with the actual output you want to be assessed, ChatGPT should provide a detailed evaluation based on the criteria.
